Fund Objective

The SPDR[®] MSCI World Quality Mix Fund seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of the MSCI World Factor Mix A-Series Index, assuming all payments from the index constituents are reinvested.

Index Description

The MSCI World Factor Mix A-Series Index captures large-and mid-cap representation across 24 developed countries and aims to represent the performance of value, low volatility, and quality factor strategies. The Index is an equal weighted combination of the following three MSCI Factor Indices in a single composite index: the MSCI World Value Weighted Index, the MSCI World Minimum Volatility Index, and the MSCI World Quality Index (each, a "Component Index").

Past performance is not a reliable indicator of future performance. Performance returns are calculated in Australian Dollars and periods of less than one year are not annualised. The performance figures contained herein are provided on a net of fees basis and do reflect the deduction of advisory or other fees. The performance includes the reinvestment of dividends and other corporate earnings.

The index returns are unmanaged and do not reflect the deduction of any fees or expenses. The index returns reflect all items of income, gain and loss and the reinvestment of dividends and other income.

Returns do not reflect the brokerage fees or the bid/ask spread that investors pay to buy and sell ETF securities on the Australian Securities Exchange. Investment return and principal value will fluctuate, so you may have a gain or loss when units are sold.

Unless otherwise noted all information contained herein is that of the SPDR MSCI World Quality Mix Fund.

\pm Frequent trading of ETFs could significantly increase commissions and other costs such that they may offset any savings from low fees or costs. Performance of an index is not illustrative of any particular investment. It is not possible to invest directly in an index.

Fund and index characteristics and holdings are as at the date indicated and are subject to change.

Issued by State Street Global Advisors, Australia Services Limited (AFSL Number 274900, ABN 16 108 671 441) ("SSGA, ASL"). Registered office: Level 17, 420 George Street, Sydney, NSW 2000, Australia · Telephone: 612 9240-7600 · Web: www.ssga.com.

SSGA, ASL is the issuer of interests and the Responsible Entity for the ETFs which are Australian registered managed investment schemes quoted on the AQUA market of the ASX or listed on the ASX.

This material is general information only and does not take into account your individual objectives, financial situation or needs and you should consider whether it is appropriate for you. You should seek professional advice and consider the product disclosure document, available at www.spdrs.com.au, before deciding whether to acquire or continue to hold units in an ETF. This material should not be considered a solicitation to buy or sell a security.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETF's net asset value. ETFs typically invest by sampling an index, holding a range of securities that, in the aggregate, approximates the full index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index. Investing involves risk including the risk of loss of principal. Diversification does not ensure a profit or guarantee against loss. Sector ETF products are also subject to sector risk and non-diversification risk, which generally results in greater price fluctuations than the overall market. Companies with large market capitalizations go in and out of favor based on market and economic conditions. Larger companies tend to be less volatile than companies with smaller market capitalizations. In exchange for this potentially lower risk, the value of the security may not rise as much as companies with smaller market capitalizations. Investments in mid-sized companies may involve greater risks than in those of larger, better known companies, but may be less volatile than investments in smaller companies. Investing in foreign domiciled securities may involve risk of capital loss from unfavorable fluctuation in currency values, withholding taxes, from differences in generally accepted accounting principles or from economic or political instability in other nations. Investments in emerging or developing markets may be more volatile and less liquid than investing in developed markets and may involve exposure to economic structures that are generally less diverse and mature and to political systems which have less stability than those of more developed countries. Risks associated with equity investing include stock values which may fluctuate in response to the activities of individual companies and general market and economic conditions. A "quality" style of investing emphasizes companies with high returns, stable earnings, and low financial leverage. This style of investing is subject to the risk that the past performance of these companies does not continue or that the returns on "quality" equity securities are less than returns on other styles of investing or the overall stock market. Characteristics presented are calculated using the month end market value of holdings, except for beta and standard deviation, if shown, which use month end return values. Averages reflect the market weight of securities in the portfolio. Market data, prices, and dividend estimates for characteristics calculations provided by FactSet Research Systems, Inc. All other portfolio data provided by SSGA. Characteristics and weights are as of the date indicated, are subject to change and should not be relied upon as current thereafter.
